

T30 Self-Bunded Diesel Storage Tank

The T30 is a high-capacity, containerised self-bunded diesel storage tank designed for safe and efficient bulk fuel storage. Its double-wall steel construction provides integrated secondary containment, eliminating the need for external bund walls and allowing for rapid installation in mining, construction, logistics, and industrial applications.

The integrated pump bay configuration provides secure housing for dispensing equipment, making the T30 ideal for fleet refuelling and high-consumption fuel environments.
